2. INTERSTITIAL SYSTEMS: BETWEEN-MISSION MECHANICS

SAFEHOUSES, SPECIALIZED WORKBENCHES, AND AMBIENT ACTIVITY CYCLES

Across all three acts, players operate from dedicated safehouses: Ice's Canal Logistics Loft / Radar Bunker (ammunition reloading press for AP and Incendiary rounds), Gohan's Little Seoul Studio / Dish Array (decryption server rack for disabling police speed cameras and radar nets), and Guess's Burro Heights / McKenzie Airfield Chop Bay (hydraulic dyno lift for swapping military turbine engines into fleet vehicles).

When switching outside missions, characters engage in trade-specific ambient actions (Ice cleaning rifles or doing counter-surveillance; Gohan packet-sniffing corporate Wi-Fi or testing drones; Guess tuning turbocharged engines or ditching patrol cars in narrow alleys). Weazel News bulletins and encrypted group smartphone texts dynamically comment on recent mission fallout.

3. TECHNICAL MOD ENGINE: BLOODLINESCORE.DLL RUNTIME ARCHITECTURE

PRODUCTION C# IMPLEMENTATION ARCHITECTURE

The core framework compiles into `scripts/BloodlinesCore.dll` referencing `ScriptHookVDotNet3.dll` targeting .NET Framework 4.8. It provides three shared singletons accessible to all mission assemblies:

- **BloodlinesSwitchManager:** Controls real-time switching, native sky-cam aerial transitions (`START_PLAYER_SWITCH`), and companion protection tethering.
- **BloodlinesAudioManager:** Streams 44.1kHz 16-bit Mono WAV dialogue lines generated by ElevenLabs with synchronized speaker-color HUD subtitles.
- **BloodlinesCheckpointManager:** Preserves stage numbers, restores character positions and health, purges destroyed wreckage, and respawns mission vehicles without softlocks.

```
// Core C# Switch Implementation Signature (BloodlinesSwitchManager.cs)
public static void SwitchHero(HeroID targetHero)
{
    if (targetHero == ActiveHero) return;
    Ped currentPed = Game.Player.Character;
    Ped targetPed = (targetHero == HeroID.Ice) ? IcePed : (targetHero == HeroID.Gohan) ? GohanPed : GuessPed;

    if (targetPed != null && targetPed.Exists() && targetPed.IsAlive)
    {
        Function.Call(Hash.START_PLAYER_SWITCH, currentPed, targetPed, 0, 1);
        Game.Player.ChangeModel(targetPed.Model);
        currentPed.Task.FightAgainstHatedTargets(180f); // Relinquished hero fights as AI
        ActiveHero = targetHero;

7. NEXT STEPS & MASTER PRODUCTION IMPLEMENTATION GUIDE

This section translates the 70-mission narrative and core engine into actionable, step-by-step developer tasks across five distinct implementation tracks.

TRACK 1: COMPILING BLOODLINESCORE.DLL

- Create a C# class library in Visual Studio targeting .NET Framework 4.8.
- Reference ScriptHookVDotNet3.dll and System.Windows.Forms.
- Integrate BloodlinesSwitchManager.cs, BloodlinesAudioManager.cs, and BloodlinesCheckpointManager.cs into the assembly.
- Build the solution and copy BloodlinesCore.dll into your Grand Theft Auto V/scripts/ directory.
- Create the directory Grand Theft Auto V/scripts/Bloodlines/audio/ to hold generated WAV dialogue files.
